Managed WordPress Package today!**

Things to note:

1 - Whilst security plugins and site updates are best case practices, they do not 100% guarantee against a site being compromised. There is no fool proof measure to completely stop WordPress from being compromised, due to the nature of the software.

Repairs to sites that are compromised are not generally covered in the Managed WordPress Packages.

2 - Any additional work required above and beyond the inclusions above, is charged at a discount rate for managed WordPress clients.

3 - The above packages does not include new site builds, templates changes or mass editing/adding of WooCommerce services.

4 - Adding of basic plugins covers simple setups and installs. More complex installs, such as WooCommerce or Event Calendar are not included.
